

## Italian Memory Foam Mattresses

Learn about Magniflex's Innovative Materials

### **Memoform**

Memoform is a high density, open cell memory foam that allows for maximum air flow. It is pressure sensitive, so it responds immediately to the weight of your body.

### **Magnigel**

Magnigel Foam is an innovative material that consists of a highly breathable, flexible gel. It provides a cool, refreshing sensation. It is ecological and crushproof, and its high density structure makes it incredibly soft and comfortable.

### **Elioform**

Elioform is a firm support foam used to give the mattresses structure. It has a high density microcellular structure that combines breathability and elasticity.

### **Eliosoft**

A softer support foam, the Eliosoft also has a high density microcellular structure that combines breathability and elasticity.

### **Outlast®**

OUTLAST® is a high tech heat-regulating fabric especially designed for astronauts' space suits. When the body temperature rises, the excess heat is absorbed by the material.

### **About Magniflex**

Magniflex has produced mattresses in Italy for more than 50 years. 100% of the materials used to make Magniflex products are sourced from Italy. **Magniflex has also received the OEKO-TEX® certification, which guarantees that each component of the end product is free of toxic substances or any substance that is harmful to humans or the environment.**

Magniflex was the first company to vacuum pack their mattresses before shipping. Vacuum packaging ensures that mattresses are kept perfectly clean for the entire journey to the end user's home. The volume of each mattress is reduced by 90%. This means fewer trucks on the roads and lower Co2 emissions.

**All Magniflex mattresses can be used with the Uno Adjustable Bases.** Which means any mattress can become a powered adjustable bed.
